OUTLET MANAGER helps manage different types of stores by telling you instantly what you have in stock, in what sizes and colours. Know the status of your layaways and sales orders by tracking them in OM. Save time on order processing. Find items faster with the ability to search by any given description.

Make price changes without having to track your items manually. Hold an in-store sale or close out certain items. Price levels can also be set up by adjusting the existing price of an item.

Save time: Key information is at your finger tips with OUTLET MANAGER's ability to track serial numbers for items received, sold and transferred for warranty and return purposes. Set up customer charge accounts for sales and payments by customer account. OM can track each customer's balance and available credit.

Easily enter your non-inventory and service item sales such as repair or delivery charges, and get reporting information on them.
